

NEC SCOPE

The National Electrical Code is revised approximately every three years and the NEC Code is the latest word on safety and acceptable procedures. It is a consensus standard and has therefore been adopted by OSHA.

The National Electrical Code is not a safety manual, nor a design manual; it is not law in and of itself. It is an accumulation of rules which if followed should produce a safe and reliable installation. It becomes law if adopted by individual authorities over specific jurisdictions (i.e., state, city federal construction agencies, etc.).

The NFPA Electrical Committee is organized to contain representatives from each national organization which have a legitimate interest in the NEC, to adopt orderly procedures for change.
